FitTrack Pro: Corporate Wellness

By Pranav Santhosh Nair

01 Problem Statement

Organisations struggle to monitor employee fitness activity in one place. Without a dedicated platform, wellness data is scattered, engagement is low, and HR teams have no way to track, analyse, or reward healthy behaviour.

01

No Centralized Tracking

Companies lack a single platform to monitor employee step counts, fitness activity, and overall health participation in real time.

02

Low Employee Engagement

Without visible leaderboards or challenge incentives, employees have little motivation to stay active or compete in wellness programs.

03

No HR Analytics Dashboard

HR managers cannot monitor participation rates, challenge completions, or per-employee wellness activity without a dedicated tool.

02 Your Solution

FitTrack Pro is a fully responsive 5-page web platform built with HTML5, CSS3 & JavaScript. It gives Corporate HR teams everything they need to manage, track, and celebrate employee wellness in one place.

01

Step Count Tracking

Employees log daily steps via the Dashboard. Totals update in real time and sync directly to the live leaderboard rankings.

02

Challenges & Badges

Six health challenges with real-time progress bars. Achievement badges unlock at 25%, 50%, 75% and 100% milestones automatically.

03

Leaderboard & HR View

A searchable, filterable employee leaderboard ranks staff by steps and wellness score. HR gets a full engagement overview dashboard.

03 Working — Method

FitTrack Pro is built across three separate files — HTML for structure, CSS for styling, and JavaScript for interactivity — with five interconnected pages sharing a common navigation bar and footer.

01

HTML Structure

Semantic tags (header, nav, section, article, footer), structured leaderboard tables, participation forms, dropdowns, and number inputs.

02

CSS Styling

Flexbox for nav & cards, CSS Grid for leaderboard. Responsive layouts, badge animations, hover transitions, and smooth scrolling.

03

JavaScript Logic

Step simulation with live leaderboard updates, real-time progress bars, conditional badge display using querySelector & addEventListener.

04 Conclusion

FitTrack Pro successfully addresses every requirement from the brief — delivering a complete, functional, and responsive corporate wellness platform ready for real-world HR deployment.

01

All Requirements Met

Every HTML, CSS & JS criterion is fulfilled — semantic tags, Flexbox/Grid layouts, forms, responsive design, and full interactivity.

02

Platform Goals Achieved

Step tracking, live leaderboard, health challenges, achievement badges, and an HR dashboard are all fully functional and linked.

03

Scalable & Deployable

Modular 3-file structure (HTML/CSS/JS) makes the platform easy to extend, maintain, and connect to a live backend in future.
